Sell Your Car

Cars

Settings

This is the main car screen for OK Car.

It is default screen a new user will see.

Users will see a list of cars in their area as a visual grid.

Tapping on a car goes to a detail page for the car.

A tab bar at the bottom allows navigation to other areas of the app:

Sell you Car: For listing your own car for sale (account required)

Cars: This current screen

Settings: Account and other settings

An interesting animation as the car list scrolls would be nice to have.

[Filter]

This shows filtering the listing of cars for sale.

The user can filter by various criteria:

· Price
· Make and Model
· Vehicle Type
· Year
· Mileage
· Features

These need to be flushed out in more specific detail

Cars

Settings
This is a filtered list screen

After the user chooses a filter, like price in this example, it is shown above the list.

The user can clear all filters to return to the full list.

One challenge we have with this design is the screen space available on a mobile app. That's a lot of filtering details to show and we don't want it to take up the whole screen. A solution is TBD.
